

## SIDUS

### STREET LIGHTING

#### SIDUS

is a new collection of BRIGHT SPECIAL LIGHTING appropriate for street lighting applications.

There are multiple ways to illuminate properly a small pedestrian walkway, a high-speed freeway, a bikeway or a parking area.

SIDUS series is a high quality illumination selection made of high pressure die - casting aluminium, covering a big range of sizes and lighting distribution beams with PC lenses.

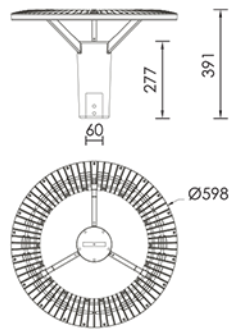

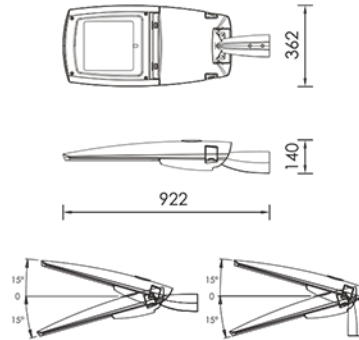

That ensures right lighting levels, good lighting uniformity, clear visibility and road safety for different street lighting arrangements and requirements.

Glare and light pollution are factors we take into consideration for a high-performance street lighting result. The vertical rotation of 15° helps to get light where it is needed with minimal loss.

NEMA socket system with remote monitor control, can be applied on any SIDUS model providing an efficient lighting level use.
